RE: Little Salt Creek Watershed Master Plan Report

Dear Mr. Kouma:

Intuition & Logic, Inc. is pleased to present the Little Salt Creek Watershed Master Plan Report to the City of Lincoln, Nebraska.

I have reviewed the contents of this document in its entirety for quality control and compliance with contractual obligations. Please accept my professional seal on the report signature page as my approval of this submittal. If you have any questions or would like additional information, please call me at your convenience to discuss.

Best regards,

Mark Meyer, P.E.
Principal Civil Engineer

Little Salt Creek Watershed Master Plan

Contents

Master Plan Report

Executive SummaryES-1

Section 1 – Introduction and Purpose

1.1 Introduction..... 1-1

1.2 Goals and Objectives 1-4

 1.2.1 Goals and Criteria 1-4

 1.2.2 Watershed Inventory 1-5

 1.2.3 Hydrology and Hydraulics 1-5

 1.2.4 Water Quality 1-5

 1.2.5 Geomorphic..... 1-5

 1.2.6 Soil Assessment 1-5

 1.2.7 Structures 1-5

 1.2.8 Public Involvement & Facilitation..... 1-5

 1.2.9 Capital Improvement Projects..... 1-6

 1.2.10 Potential Guidelines/Ordinances..... 1-6

 1.2.11 Technical Advisory Committee (TAC) 1-6

1.3 Public Participation Process..... 1-6

 1.3.1 Open House Events..... 1-6

 1.3.2 Citizen Advisory Committee 1-7

 1.3.3 Website and Newsletter 1-8

1.4 Technical Advisory Committee 1-8

Section 2 – Data Collection and Development

2.1 Watershed Inventory 2-1

2.2 Hydraulic Structure Field Survey 2-1

2.3 Base Mapping/Triangular Irregular Network 2-2

2.4 Geomorphic Investigation..... 2-4

 2.4.1 Geomorphic Background Investigation 2-4

 2.4.2 Geomorphic Field Investigation 2-4

 2.4.3 Supplemental Geomorphic Aerial Photo Analysis 2-7

2.5 Soil Assessment 2-8

 2.5.1 Methodology 2-8

 2.5.2 Dispersive Soils 2-8

 2.5.3 Saline Seeps 2-8

 2.5.4 Summary and Recommendations 2-8

2.6 Existing Projects and Conservation Easements 2-11

Section 3 – Hydrologic Model Development

3.1	Introduction.....	3-1
3.1.1	Basin Description.....	3-1
3.2	Methodology.....	3-1
3.2.1	Incorporation of Previous Little Salt Creek Model.....	3-1
3.2.2	Basin Delineation.....	3-4
3.2.3	Rainfall.....	3-6
3.2.4	Runoff Volume Calculation.....	3-6
3.2.5	Runoff Hydrographs (Lag Time).....	3-10
3.2.6	Routing.....	3-11
3.3	Model Verification.....	3-12
3.3.1	Statistical Analysis of Stream Gauge Data.....	3-12
3.4	Sensitivity Analysis.....	3-16
3.5	Model Calibration.....	3-16
3.5.1	Historical Storm Event Calibration.....	3-16
3.6	Modeling Results.....	3-21
3.7	Future Land Use.....	3-25
3.7.1	Calculation of Existing and Future Curve Numbers.....	3-27
3.7.2	Calculation of Changes to Initial Storage.....	3-28
3.7.3	Guidelines for Modifying the Hydrologic Model Initial Storage to Account for Future Land Use Changes.....	3-31
3.7.4	Modifying the Hydrologic Model Lag Time to Account for Future Land Use Changes.....	3-32

Section 4 – Hydraulic Model Development

4.1	Introduction.....	4-1
4.2	HEC-RAS Model Development.....	4-1
4.2.1	Stream Network, Cross Sections, and Reach Lengths.....	4-2
4.2.2	Manning’s n-Values.....	4-5
4.2.3	Roadway Crossings.....	4-5
4.2.4	Expansion and Contraction Coefficients.....	4-6
4.2.5	Ineffective Flow Areas.....	4-6
4.2.6	Boundary Conditions.....	4-6
4.3	Special Modeling Cases.....	4-8
4.3.1	Split Flow Locations.....	4-8
4.3.2	Multiple Structure Analysis.....	4-9
4.3.3	Roadway Skew Analysis.....	4-18
4.4	Model Calibration.....	4-18
4.5	Floodway Determination.....	4-20

Section 5 – Floodplain Management Tools

5.1	Introduction.....	5-1
5.1.1	Floodplain Delineation Process.....	5-1

5.1.2 Study Floodplain and Floodway Maps 5-2

Section 6 – Water Quality and Bio-Assessment

6.1 Water Quality..... 6-1
 6.1.1 Water Quality Discussion 6-5
 6.2 Stream Bio-Assessment 6-6
 6.2.1 Stream Bio-Assessment Results 6-6
 6.3 Water Quality & Bio-Assessment Summary 6-9
 6.4 Water Quality Future Land Use Hydrology..... 6-10
 6.4.1 Hydrology Modeling of Future Land Use 6-10
 6.4.2 Low Flow Analysis..... 6-11

Section 7 – Drainage Criteria and Ordinance Review

7.1 Introduction..... 7-1
 7.2 Storm Water BMPs 7-2
 7.2.1 Integrated Detention Facility 7-2
 7.2.2 Alternative Site Design..... 7-2
 7.3 Dispersive Soils 7-3
 7.4 Conservation Culvert or Crossing..... 7-3
 7.5 Adopt Revised Floodprone Area as Best Available Information 7-5

Section 8 – Geomorphic Evaluation

8.1 Fundamentals of Fluvial Geomorphology 8-1
 8.1.1 Major Models..... 8-1
 8.1.2 Temporal and Spatial Implications 8-14
 8.1.3 Sediment Transport..... 8-16
 8.2 Little Salt Creek Evaluation..... 8-17
 8.2.1 Channel Geometry 8-18
 8.2.2 Boundary Material 8-19
 8.2.3 Hydraulics..... 8-25
 8.2.4 Sediment Transport Competency..... 8-25
 8.3 Physical Stability of the Watershed 8-25
 8.3.1 Existing Channel Process..... 8-25
 8.4 Methods of Management 8-29
 8.4.1 Watershed-Scale Stability..... 8-29
 8.4.2 Local Stability..... 8-30
 8.4.3 Conclusions..... 8-31

Section 9 – Capital Improvement Projects

9.1 Introduction..... 9-1
 9.2 Capital Improvement Projects..... 9-1
 9.2.1 Problem Identification 9-1
 9.2.2 Evaluation Approach 9-2
 9.2.3 Stream Stability Projects..... 9-3

9.3	Other Improvement Recommendations	9-29
9.3.1	Problem Identification	9-29
9.3.2	Project Evaluation Approach	9-35
9.4	Prioritization	9-37

Section 10 – Implementation

10.1	Introduction.....	10-1
10.2	Implementation of Capital Improvements	10-1
10.3	Policy and Ordinances and Resolutions.....	10-1
10.4	Education Program.....	10-2
10.5	Project Funding.....	10-2
10.6	Coordination Efforts	10-4
10.7	Additional Studies.....	10-5
10.7.1	Additional Studies Summary	10-6
10.7.2	Phase II Scoping	10-6

Section 11 – Glossary of Terms and References

11.1	Glossary of Terms.....	11-1
11.2	References.....	11-10

Appendices

- Appendix A* - Digital Deliverables
- Appendix B* - Public Participation Materials (Summary Documents, Attendance Lists, Minutes, Watershed News)
- Appendix C* - Hydrologic Model Input Data and Results
- Appendix D* - Hydraulic Model Input Data and Results
- Appendix E* - Aerial Photograph Interpretation
- Appendix F* - Hydraulic Structure Survey and Design Data
- Appendix G* - Geomorphic Data Summary By Reach
- Appendix H* - Soil Assessment Data
- Appendix I* - Watershed Inventory Data Table
- Appendix J* - Capital Improvement Project Prioritization Ranking Worksheets
- Appendix K* - Capital Improvement Project Cost Worksheets
- Appendix L* - Other Improvement Recommendations
- Appendix M* - Stream Profiles
- Appendix N* - Hydraulic Structure Performance Data
- Appendix O* - Water Quality and Bio-Assessment Reports
- Appendix P* - Groundwater Seep Survey Data

Tables

ES.1	Capital Improvement Project Summary Results.....	ES-9
2.1	Geomorphic Field Data Themes	2-5
3.1	Rainfall depths corresponding to each return period (note 500-yr depth is interpolated)	3-6
3.2	Lookup table used to define the curve number for each land use-soil group combination.....	3-8
3.3	Constant loss rates as defined by Skaggs and Khaleel (1982).....	3-10
3.4	Results of the peak flood flow frequency analysis	3-12
3.5	Results of the volume-duration-frequency analysis.....	3-13
3.6	Comparison of peak flows resulting from modifications to each basin's initial loss parameter.....	3-16
3.7	Comparison of cumulative volumes resulting from modifications to each basin's initial loss parameter	3-16
3.8	HEC-HMS model results compared to the flood flow frequency analysis.....	3-21
3.9	HEC-HMS model results compared to the volume-duration-frequency analysis.....	3-21
3.10	HEC-HMS model resultant peak flows for the 2-, 5-, and 10-yr return periods.....	3-22
3.11	HEC-HMS model resultant peak flows for the 50-, 100-, and 500-yr return periods.....	3-22
3.12	HEC-HMS model resultant cumulative volumes for the 2-, 5-, and 10-yr return periods	3-23
3.13	HEC-HMS model resultant cumulative volumes for the 50-, 100-, and 500-yr return periods	3-23
3.14	Lookup table used to define the curve number for each land use-soil group combination.....	3-27
3.15	Breakdown of future land uses applied to agricultural lands within Tier 2.....	3-28
3.16	Calculated increases in imperviousness for the Tier 1 future land use scenario	3-29
3.17	Calculated increases in imperviousness for the Tier 2 future land use scenario	3-30
3.18	Guideline for modifying subbasin initial storage depth based on change in curve number	3-31
3.19	Look up table for the lag time multiplying factor due to changes in curve number (future CNs ranging from 62-80).....	3-33
3.20	Look up table for the lag time multiplying factor due to changes in curve number (future CNs ranging from 81-98).....	3-35
4.1	HEC-RAS Model Data Sets.....	4-2
4.2	Range of Manning's n-values utilized	4-5
4.3	Contraction and expansion coefficients utilized	4-6
4.4	Frequencies for coincidental occurrence based upon the ratio of watershed sizes.....	4-7
4.5	Assigned boundary condition stages for the Little Salt Creek.....	4-7
4.6	Locations and frequencies of the split flows.....	4-8
4.7	Locations and frequencies of multiple opening analysis	4-9

4.8	HEC-RAS model output at the gauge location.....	4-19
5.1	Little Salt Creek Confluence Level Pool Elevations (NAVD88).....	5-3
6.1	Nebraska ICI Rating by Sample Site	6-6
6.2	Comparison of peak flows under existing and future conditions for the 0.5" runoff event.....	6-14
6.3	Comparison of total volumes under existing and future conditions for the 0.5" runoff event.....	6-14
6.4	Comparison of volumes within the first six hours of runoff under existing and future conditions for the 0.5" runoff event.....	6-15
8.1	Hydraulic Slope and Fluvial Geomorphic Process	8-12
9.1	Bridge and Culvert Topping	9-30
9.2	Capital Improvement Project Summary Results.....	9-39
