This is the last flu update for 2021-2022 flu season. While the flu season officially goes through the end of April, this season’s flu activity peaked the end of December and then after a declined peaked again at a lower level in mid-April. Flu activity continues to decline and remains at a low level locally, while some areas of the country are still seeing high levels of flu activity.

The Lancaster County weekly positivity rate for influenza decreased to 3.3 percent.

CDC estimates that, so far this season, there have been at least 7.3 million flu illnesses, 74,000 hospitalizations, and 4,500 deaths from flu.
