

RECYCLING CORRUGATED CARDBOARD IN HOME CONSTRUCTION & RENOVATION

FACT SHEET

CORRUGATED CARDBOARD DISPOSAL BAN

Corrugated cardboard is not garbage. Starting **April 1, 2018**, the landfill will **not accept** clean and dry corrugated cardboard.¹ It must be reused or recycled. Corrugated cardboard (pictured below) is defined as three or more layers of paper with the middle layer rippled or corrugated.

CHALLENGES TO RECYCLING IN HOME CONSTRUCTION AND RENOVATION

This fact sheet provides useful information to help come construction and renovation companies keep corrugated cardboard out of the landfill and overcome typical recycling challenges, including: storing cardboard in an already tight work area, where to take it, how to keep it dry, managing the service of recycling containers, managing subscription and recycling container costs, and how to reduce dumping in recycling containers.

VALUE OF HOME CONSTRUCTION AND RENOVATION RECYCLING

- **Cost Savings.** For every ton of garbage diverted from the landfill, \$34.75 in disposal costs is avoided. Collection fees must still be paid when recycling but the tipping fee is less than landfilling or non-existent. Sometimes recycling high-value, clean materials, such as cardboard and metal, earn businesses extra revenue.
- **Save Energy and Protect the Environment.** The energy spent to recycle materials like aluminum, plastics and paper is far lower than the amount of energy it takes to produce these products from raw materials.
- **Reputation.** Recycling is a visible way companies can show their commitment to environmental stewardship. In Lincoln, companies can earn public recognition for their recycling leadership through the [Recycle Lincoln Leadership Recognition Program](#).

¹ LMC 8.32.040, Sect. C / Recyclable cardboard* shall not be accepted by the City for disposal in the City's public sanitary landfills effective April 1, 2018. (*Clean and dry corrugated cardboard.)

OVERCOMING RECYCLING CHALLENGES IN HOME CONSTRUCTION AND RENOVATION

- **Develop a Plan for Cardboard.** If your business does not currently recycle corrugated cardboard, begin planning as soon as possible (corrugated cardboard disposal ban effective as of April 1, 2018). Discuss convenient options to contract on-site recycling with your current garbage or recycling collector, or search for better services by contracting a new collector. Every [garbage collector](#) is required to offer recycling services to their commercial customers at least twice per year. You may also choose to self-haul cardboard to a recycling processor (see Links & Resources below). Public recycling sites are provided for **residential** use and should not be used by commercial establishments.
- **Designate Responsibility.** Designate an employee for the implementation of on-site diversion of recyclables and subcontractor personnel training. The site supervisor is a good candidate for this role. Duties might include managing waste generated on site, ensuring placement of adequate containers, scheduling pick-up or delivery of corrugated cardboard containers, and ensuring correct signage and procedures are followed.
- **Make a Plan with a Recycling Collector or Processor.**
 - If a home is being built in an established neighborhood, a curbside recycling collector already serving the area could stop by on a weekly basis.
 - Local garbage and recycling collectors provide a menu of services. They can discuss what system is best implemented at your home construction site, including weekly pick-ups and container availability ranging from a two cubic yard dumpster to a 40 cubic yard roll-off box.
 - Deliver corrugated cardboard directly to one of Lincoln's three recycling processors at no charge. Call to find out how to obtain a gaylord box and proper procedures for dropping it off. Find out if you will be paid for the quantity of corrugated cardboard you generate.
- **Keep Corrugated Cardboard Clean and Dry.**
 - Collect and store flattened corrugated cardboard in the house's garage or basement for pick-up.
 - If you use a dumpster, make sure it has a lid so the cardboard stays dry.
 - If using a gaylord box, place it in a covered location (i.e. under a roof).
- **Save Space.**
 - Remove all packing materials and flatten cardboard to save space on site and in the collection container.
 - Recycling collectors may provide a central corrugated cardboard collection container at the general or subcontractor's shop. Transport corrugated cardboard from the job site to this central location.
- **Place Containers.** Use a designated dumpster to collect corrugated cardboard, or a gaylord box that can be hauled to a recycling processor. Make sure garbage containers are near cardboard containers to reduce mingling of garbage and corrugated cardboard. Recycling processors will refuse a load of corrugated cardboard if it is contaminated (mixed with other material, soiled or wet). If unwanted dumping of garbage is an issue, consider putting a lock on the dumpster. Having restrictive lids on recycling containers will also reduce problems of dumping garbage in recycling containers.

One option for collecting cardboard on site is to designate a dumpster for cardboard only.

Another option is to use a gaylord box, which is made of cardboard and can be transported to a recycling processor.

A recycling dumpster with cutout for allowing only cardboard, reduces contamination.

- **Educate Your Staff.** Discuss the recycling separation policy with staff and subcontractors. Reiterate procedures at every job site meeting.
- **Monitor.** It is important that the designated recycling supervisor periodically check garbage and recycling containers to ensure corrugated cardboard is being properly recycled. If problems exist, find the responsible party and instruct them on proper disposal of corrugated cardboard.
- **Expand Your Recycling Program.** Once you've mastered corrugated cardboard, expand your construction site recycling to include metal, brick, fixtures, wood, ceiling tile or other materials. Refer to Nebraska Recycling Council's [Construction and Demolition Waste Management and Recycling Guide](#) to get started.
- **Celebrate Your Success.** Create an atmosphere of pride by continually promoting the success of your recycling program. Report the amount of recyclables diverted from the landfill to staff, managers, subcontractors, clients and the public. Apply to the [Recycle Lincoln Leadership Recognition Program](#) and earn public recognition for your efforts.
- **Get Financial Assistance.** Take advantage of the City's [Waste Reduction and Recycling Assistance Program \(WRRAP\)](#), which provides rebates of up to \$750 to start a recycling program.
