---

Hello councilors. I am a Lincoln resident and live just off 45<sup>th</sup> and O. I am writing to inquire why the street lights on O street, (specifically from about 40<sup>th</sup> street to 70<sup>th</sup> street) are being replaced with noticeably blue and purple LED lights?

To the naked eye they seem to provide barely a fraction of the visibility that the traditional lights provided and I am curious from a liability stand point why we are leaning toward dim lights to illuminate arguably the busiest road in Lincoln? Could anybody provide an explanation for this or a source that says purple street lamps are safe & effective? There are all sorts of regulations on the lights that myself as a citizen can and cannot have on my vehicle... Why is it not the same for whoever's in charge of replacing street lamp bulbs?

A city in Minneapolis had similar reporting's and found that the lightbulbs were faulty (source: <https://www.cbsnews.com/minnesota/news/purple-street-lights-apple-valley/> ) So again, If you would kindly share the information that was used to make this decision I would be greatly appreciative. Thank you.

Hello,

I'm trying to determine if and when the Lincoln City Council adopted new districts following the recent Census. What would be the best way to obtain GIS shapefiles of the districts once they are finalized? I appreciate your assistance.

Thank you,  
Rebecca

Council:

I received a letter from Asst. City Atty. Spahn denying liability.

I encourage you to review the accident report attached which states that an independent witness confirmed that your insured drove through a red light. That traffic violation caused the accident, not the fact that my client was above the legal limit.

Thank you.
