

PUBLIC HEALTH NURSE II

NATURE OF WORK

This is responsible public health nursing work assessing and providing for individual health needs, and promoting community-wide health care.

Work involves providing nurse assessments to high risk clients and populations as a part of a team of medical, psychosocial and public health practitioners; developing, implementing and evaluating an individual, family or population-based care plan to meet specified health needs; and instructing individuals and populations in preventive health care practices. Work may include; assisting schools in developing prevention campaigns or immunization opportunities; working as an equal partner with communities who experience health disparities to develop, implement and evaluate solutions that work for them; presentations to the general public, community agencies, civic organizations, students, and other interested groups on public health topics. Work also involves health maintenance interventions such as monitoring chronic health conditions, pregnancy, postpartum and newborn care, obtaining specimens for laboratory analysis, administering injections, and maintaining health records. Employees in this classification use leadership skills and independent judgment when completing work assignments, but decisions are made in accordance with established practice and departmental policies and procedures. Supervision is received from a supervisor with work being reviewed through established quality control measures. Lead supervision may be exercised over subordinate Public Health Nurses, Registered Nurses and/or Licensed Practical Nurses.

EXAMPLES OF WORK PERFORMED

Provide nursing assessments to individuals and populations such as; pregnant women, postpartum women, newborns and young children at high-risk for adverse health conditions; newly arrived immigrants; adolescents who are at risk for infectious disease; and adults at-risk for adverse health outcomes.
