

Larson moved to approve the remaining

2. **Brian Chaffin**, of Olsson Associates, who has been involved with design of the third lagoon, testified, reiterating that this lagoon is needed to finish the build-out

to the third lagoon would be overflow from the two existing lagoons. It would be fairly well treated.

In the interest of public health of the residents living both to the north and to the east, Esseks inquired as to what kind of risk there would be for overflow in the third lagoon. What would be the worst case scenario? Duerschner suggested that short of a catastrophic rain event, the lagoon is designed to overflow through a pipe. It does not overflow over land. It would be

transferred by a pipe to the lagoon is sized such that it
