Dear Planning Commission Members;

I write to submit my support for the Planning Department's commitment to open public hearings on the development of wind energy in Lancaster County, and also my support for such development generally. I strongly believe in the development of such non-carbon based energy sources that contribute far less pollution to our environment while also keep electricity rates reasonable. Given transparent negotiating by the Department and proper consideration to individuals' concerns and wishes, I feel that a comprehensive, adequate renewable energy plan is desirable and possible.

Thank you for your commitment to local, forceful democracy, and for your commitment to ensuring residents of our county have access to affordable, reliable, clean electricity.

Best regards,

Randall Gilbert
