

Information submitted by Anthony Oberley

I think the following link has some important information that should be placed on the website. Coal plants are being phased out both in the U.S. and worldwide, and new energy sources have to be found. What happens if the coal plant in Hallam is closed someday?

Link - [Global Wave of New Coal Plants Is Going Bust, New Report Finds](#)

COAL IS DYING

for every 1 new coal plant built worldwide, 2 have been shelved or cancelled since 2010.

In some places, the failure to complete rate is as high as 6:1

Global Wave of New Coal Plants Is Going Bust, New Report...

Today, the Sierra Club and CoalSwarm, keepers of the global coal plant tracker database, released a comprehensive report on the global coal pipeline -- and the news ...

The menu at the bottom left of the page takes you to the wind noise study. It has some interesting diagrams comparing the noise to things like microwave ovens, etc.
